Welcome to Ace Station

Where “**Equipment for rare talent**” is imagined, designed, and crafted by an elite team of top performers. And it isn't just a team, it's a legacy built on innovation, with more patents than all other racquet brands combined.

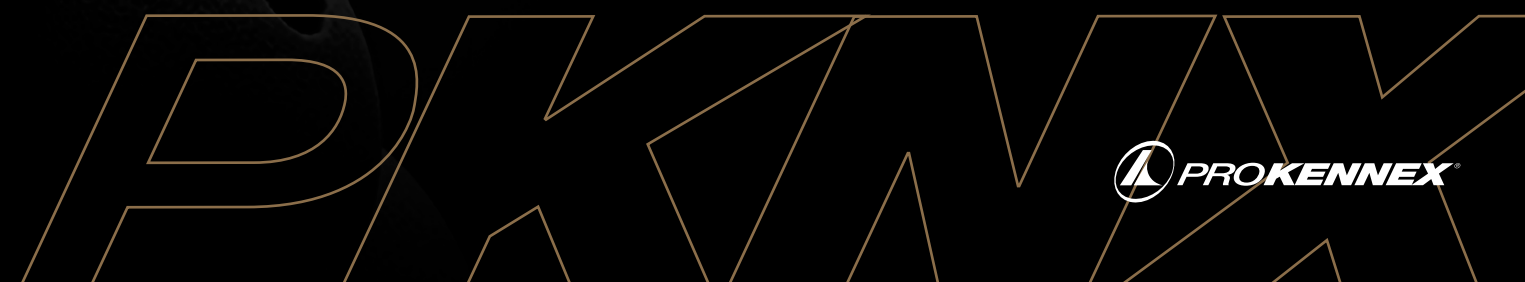

For over 42 years, we've innovated and created equipment for world champions. Whether under our own name or for other leading brands in the racquet category. Our commitment to performance and innovation has attracted apex brands like Nike, Cobra, Easton, and Schwinn Racing—leaders who seek market dominance through cutting-edge design. Innovation is in our **DNA**, and it's where we channel our passion and expertise.

Ace Station was created to set a new standard for the most discerning athletes who demand as much from their equipment as they give to their game. Our small-batch approach never compromises. Every article is crafted with precision, every racket and paddle a testament to timeless performance. This is where **Pro Kennex**'s finest minds and hands converge to create something truly exceptional.

Our team of innovators, fabricators, and specialists face every challenge head-on. When you push the limits of performance, they push innovation further—because progress is the only real competition. It's in every detail, every move, and every win.

We're not for the masses. We're for the elite. For those who push boundaries and demand nothing less than the best in design and performance. **Ace Station** is built to earn the respect of the very best. That's our mission—driven by a small, passionate team under one roof.

Embrace your independence. Own your edge.

NATURAL BORN WINNER

Since 1975, we've celebrated talent—acknowledging its value and nurturing its potential.

The **Black Ace** began our legacy of innovation, setting the standard for revolutionary performance at every level of play. This pioneering spirit has evolved into Ace Station—a premium range of equipment that extends our expertise beyond tennis into all racket sports. **Ace Station** is where cutting-edge technology meets advanced materials and engineered to elevate your game and sharpen your skills.

At **Ace Station** Operations, Pro Kennex is dedicated to crafting elite performance equipment, pushing the boundaries of frame design to achieve unmatched precision and quality. No expense is spared in concept, design, materials, or testing, ensuring an experience reserved for a select few.

WE SEARCH FOR THE BEST SOLUTIONS IN TECHNOLOGY TO RAISE PERFORMANCE TO THE MAXIMUM

KINETIC

TIMING IS EVERYTHING

The **Kinetic System** stands alone in the industry, featuring precision engineered chambers that capture and store kinetic energy. Upon impact, this stored energy is released in perfect harmony with the racket's natural energy flow. This seamless integration powers the only true **Dynamic Twist Weight System**, actually reinforcing frame stability while actively absorbing shock and vibration at the moment of **contact** protecting your arm and accelerating recovery.

ACTIVE DAMPING SYSTEM

Inside each **Kinetic Comfort Cap** is a precise number of inelastic microspheres. When the frame oscillates during play, these spheres engage in a dance of friction, effectively dampening vibrations. This cutting-edge technology actively **mitigates the natural intrusion of excess vibration**, providing a smoother, more controlled feel that significantly enhances the **racket's performance** and your **comfort on the court**.

CARBON FIRE

A REVOLUTIONARY PADDLE FACE TECHNOLOGY

At the core of **Carbon Fire technology** lies a specially engineered carbon plate, subjected to a unique high-heat treatment process. This treatment not only bolsters the structural integrity of the paddle face but also creates a surface texture that maximizes ball friction and enables players to achieve an **unmatched level of spin**.

Built to last. Advanced materials that stand up to wear, keeping your game strong, match after match.

ProKennex utilizes their patented modern epoxy resin systems to bond the carbon plate to the paddle's core, **eliminating 'dead spots'**. This ensures a uniform response across the entire paddle face.

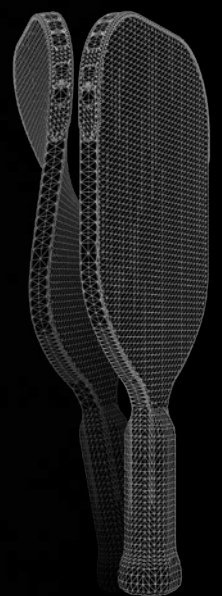

Carbon Fire offers players a significant advantage and empowers them to perform complex plays with assurance, positioning it as a pivotal **innovation in both** professional and amateur pickleball circuits.

RACQUET SENSE

ALL YOU NEED IS STABILITY

Our **Racquet Sense design** analysis represents a sophisticated approach to paddle engineering, where we meticulously map **every aspect** of the paddle's profile to **optimize well time**, enhance energy transfer, maintain maximum face stability, and increase resistance to torque.

This precision mapping ensures consistent and dependable ball action.

Better Shots. Faster Recovery. Pain-Free Performance.

-20% SHOCK -43% VIBRATION

50% REDUCTION IN TORSIONAL ROTATION

BLACK ACE¹⁴

Building on a Legacy of Excellence.

Step into the future of pickleball with the Black Ace 14.

Our latest evolution in shape design has transformed the renowned Black Ace Power Plant, using a newly developed chassis design that adds impressive control and new levels of precision, instantly establishing this paddle as the crown jewel of our masterpiece franchise series.

Player Profile	All Courter
Weight	7.9 oz
Grip	4 in Taper
Handle Length	5.3 inches
Paddle Length	16 inches
Paddle Width	8 inches
Paddle Face	Carbon Fire
Core Material	Polypropylene Honeycomb
Core Thickness	14mm (.551")

BLACK ACE¹⁶

Power, Control, and Innovation in One Package.

With the Black Ace 16, power and control come together in perfect harmony, delivering a paddle that excels in every situation.

From aggressive baseline play to finesse at the kitchen line, this paddle adapts effortlessly to your game, delivering peak performance when you need it most.

Player Profile	Touch and Control
Weight	7.9 oz
Grip	4 in Taper
Handle Length	5.3 inches
Paddle Length	16 inches
Paddle Width	8 inches
Paddle Face	Carbon Fire
Core Material	Polypropylene Honeycomb
Core Thickness	16mm (.629")
